CMHC Housing Starts Data

This Presentation will Answer Three Questions

- How does CMHC collect housing starts data?
- How does CMHC define a new construction start versus a conversion start?
- Does CMHC track all dwelling types that count towards municipal housing targets?

Four Main Steps in Collecting and Releasing Starts Data

1. Monthly building permit reports collected from municipalities
2. Permits for **new residential construction**, **conversions** and demolitions reviewed and entered into our database for tracking
3. Field enumerators receive permits to track and visit construction sites, recording starts (**new construction only**), completions & absorption information
4. Monthly data released on the 11th working day of the next month

Conversion = Net Gain or Loss of Homes on an Existing Foundation

1. Non-residential structure converted to residential structure
2. Existing residential structure has units added using only existing foundation (secondary unit*)
3. New house built on an existing foundation.
4. Existing residential structure has units reconstructed resulting in fewer units, on an existing foundation.
5. Residential structure converted to non-residential structure.
6. Existing residential unit(s) within an existing mixed-structure removed or converted to non-residential space.

New Construction Start = New Foundation 100% Complete

Conversion Start = Building Permit Issued

Some Dwellings Types Are Not Tracked by CMHC

- Dwellings without their own entrance, kitchen and bathroom (**nursing homes***, **student housing***, hostels)

- Dwellings not permanently attached to a site (mobile homes)

- Dwellings unsuitable for year-round occupancy (summer cottages)

HOUSING STARTS, COMPLETIONS AND UNDER CONSTRUCTION

These tables are tracking new home construction activity such as housing starts, number of units under construction, and completions. The data is organized by region, province, Census Metropolitan Area (CMA) and dwelling type.
