

# CYBER INCIDENT MANAGEMENT FOR ONTARIO MUNICIPALITIES (CIMOM)

CYBERSECURITY

## Helping you manage cyber incidents in today's ever changing IT environment.

**LAS is pleased to announce a new program designed to help municipalities manage cyber incidents in today's ever changing IT environment.**

After a competitive RFP process, LAS is partnering with ISA Cybersecurity. ISA Cybersecurity is proudly Canadian company, a market leader in cyber security-focused solutions and services provider, with over 31 years of experience delivering cyber security services. Their mission is to help customers achieve their privacy and security goals, and to be proactive in the fight against security threats.

This program has been designed for municipalities without cyber insurance and for a variety of budgets. The goal of the program is to provide access to quick, effective, and orderly response to cyber security incidents. This includes assessing, identifying, containing, eradicating and providing lessons learned post incident.

### The Program

- Municipalities can choose from one of three retainer levels
- Municipalities can utilize unused hours, upon renewal, in the first six months of the next year for a variety of cyber incident, response and security work
- Includes onboarding with preparation activities aimed at gathering relevant information about the networking and security environment ahead of a security incident
